

A property inspector gets paid \$250 for each property inspected. If it takes her 4 hours on average to inspect a property and she spends 40 hours each week inspecting properties, what is her average hourly wage? $\$/h$

$\$250/\text{property}$ $4\text{ h}/\text{property}$ $40\text{ h}/\text{week}$

$$\frac{\$250/\text{property}}{4\text{ h}/\text{property}} = \$62.50/\text{h}$$
